PROFESSIONAL SUMMARY

Systems Engineer with 5+ years of experience building distributed backend systems, mission-critical aviation platforms, financial applications, and high-performance mobile products. Experienced in Java, Spring Boot, REST APIs, RabbitMQ, WebSockets, PostgreSQL, Flutter, and native media processing. Currently contributing to an aviation information-management platform in Japan in collaboration with JAXA and industry stakeholders. Skilled in owning features from technical specification and system design through implementation, integration testing, and production delivery.

TECHNICAL SKILLS

Backend	Java, Spring Boot, Spring MVC, REST APIs, WebSockets, MyBatis
Distributed Systems	RabbitMQ, asynchronous messaging, caching, real-time data flows
Databases	PostgreSQL, SQL, Firebase, Cloud Firestore, Supabase
Mobile & Native	Flutter, Dart, Swift, Objective-C, C++, FFmpeg, AVFoundation
Frontend	JavaScript, jQuery, JSP, HTML, CSS
Infrastructure	Docker, AWS, Git, Linux, API testing and debugging

EXPERIENCE

Systems Engineer

FundastA

May 2026–Present

Nagoya, Aichi, Japan

- Engineer backend and integration components for a **mission-critical aviation information-management platform** delivered in collaboration with **JAXA** and external aviation stakeholders.
- Design Java and Spring Boot services supporting disaster-information processing, restricted-airspace distribution, aircraft targeting, mission assignment, and delivery-status tracking.
- Build asynchronous communication workflows using **RabbitMQ and WebSockets**, enabling operational information to move reliably between web applications, backend services, communication components, and aircraft-facing systems.
- Design REST APIs and persistence workflows using **Spring MVC, MyBatis, and PostgreSQL**, including caching, transmission-state management, and external-system synchronization.
- Convert Japanese interface-control documents and stakeholder requirements into production-ready message schemas, validation rules, integration services, and frontend functionality.
- Diagnose distributed-system failures involving authentication, HTTP routing, message queues, database state, WebSocket payloads, and browser clients.
- Own features across requirements analysis, system design, implementation, integration testing, technical documentation, stakeholder review, and Git-based delivery.

Senior Software Engineer

Pingtop

September 2024–April 2026

London, United Kingdom (Remote)

- Lead the architecture and development of advanced video-editing capabilities, including overlays, voice-over recording, music integration, compression, and media manipulation across mobile platforms.
- Architect a resilient video-processing and upload pipeline using retries, background compilation, queue management, and recoverable upload states to maintain reliability under unstable network conditions.
- Implement real-time media processing using **FFmpeg, AVFoundation, Objective-C, Swift, C++, and Flutter**, balancing output quality, device performance, memory usage, and server workload.
- Build native platform integrations and use Dart isolates to execute resource-intensive editing and upload operations without blocking the application interface.

- Collaborate across product, design, backend, and mobile engineering teams to deliver location, content-visibility, publishing, and video-detail workflows from technical specification through production release.

Software Engineer

Asset Matrix Microfinance Bank (Cashmatrix)

August 2023–September 2024

Ikeja, Lagos, Nigeria

- Built security-sensitive fintech features including liveness detection, facial recognition, OTP, fingerprint, and location-based authentication.
- Developed the Matrix Saves feature and saved-beneficiary workflows supporting recurring customer deposits and faster repeat transactions.
- Improved transaction-history performance through pagination, state-management optimization, and resilient API integration.
- Integrated secure payment and financial-service APIs across mobile and backend components.
- Collaborated with backend, security, and product teams on payment flows, incident response, application releases, and production support.

Software Engineer

Lytical Technology

July 2022–August 2023

Lekki, Lagos, Nigeria

- Developed donation and estate-management products using **Flutter, Java Spring Boot, Firebase, and REST APIs**.
- Engineered backend services and database integrations for property management, visitor workflows, documentation, payments, and real-time analytics.
- Implemented secure payment-processing and data-protection controls aligned with fintech and PCI DSS requirements.
- Delivered applications across the complete development lifecycle, including requirements analysis, implementation, testing, deployment, and production maintenance.

Software Engineer

Zercom Systems

April 2021–June 2022

Victoria Island, Lagos, Nigeria

- Built and maintained an education platform supporting course delivery, learner progress tracking, and communication between educators and students.
- Maintained an ATM-monitoring platform, improving observability, incident diagnosis, security controls, and operational reliability.
- Developed responsive application interfaces and integrated frontend applications with backend services and databases.
- Supported system troubleshooting, application maintenance, testing, and production releases.

Intern

Off My Chest

February 2019–January 2021

Ikeja, Lagos, Nigeria

- Contributed across the development lifecycle of an anonymous social platform using Java, Spring Boot, Flutter, and Firebase.
- Developed mobile and backend functionality enabling users to share personal experiences and access professional consultations securely.
- Assisted with API integration, application testing, debugging, and production releases.

SELECTED PROJECTS

Pingtop – Cross-platform social video application built with Flutter, Swift, Objective-C, C++, FFmpeg, and AVFoundation. [App Store](#)

Cashmatrix – Secure digital-banking application supporting authentication, savings, transfers, beneficiary management, and transaction history. [App Store](#) [Play Store](#)

Givegle – Donation platform built with Flutter, Firebase, Cloud Firestore, and Google Cloud Functions. [App Store](#) [Play Store](#)

EDUCATION

Advanced Diploma in Software Engineering, Aptech Computer Education 2018–2021

Relevant coursework: Java Enterprise Edition, software engineering, database systems, and computer networking.

LANGUAGES

English: Native/Fluent **Japanese:** Beginner
